

Steele, J. & Jenkins, D. (1998). Pierre Koenig. Hong Kong: Phaidon Press Limited.

Pierre Koenig was at the forefront of environmentally-oriented architecture and acknowledges that each site has a microclimate that must be closely studied before beginning the design process. Stahl House environmental strategies include, passive design through radiant heating of house and passive cooling through cross ventilation provided by sliding glass windows that capture cooling airflows. Additionally the pool is heated by solar panels.
